

## Trimble Solutions Making a Big Difference to Global Airport Contractors

Dear [FirstName] ,

Daxing Airport is owned by Beijing New Airport Headquarters (BNAH); three supervisory companies under BNAH oversee 14 airport construction contractors for flight zone construction.

“To ensure accuracy and the best efficiency on the airport project, BNAH required all companies and contractors to digitally control construction methods to record and track quality, progress, and efficiency,” said Michael Lv, a Trimble project manager on the new airport. So when BNAH’s technology solution tender was created it included tightly defined requirements for dynamic, impact and vibration compaction; field supervision survey tools; concrete vehicle tracking; and all relevant software.

BNAH chose to partner with Trimble, because it was the only solution able to meet every requirement of the tender.
